

**AMENDMENTS TO THE ABSTRACT:**

Please amend the Abstract as follows. A clean copy of the Abstract is attached.

An ~~improved~~ antenna arrangement has ~~the following features:~~ the at least two antenna element systems (3.1, 3.2) are arranged and/or fed such that the main lobe (7.1) of the first antenna element device (3.1) and the main lobe (7.2) of the second antenna element device (3.2) include an angle  $\alpha$  between one another, a A network (13) is provided via which the first antenna element system (3.1) and the second antenna element system (3.2) can be supplied with a signal whose intensities can be set differently relative to one another, ~~so that it~~ It is possible in this way to set a different angular transmission direction  $\alpha$  for the antenna arrangement.
